STRIKE ZONE – WHAT IT IS

Strike Zone is an advanced metric driven handicapping report that attempts to predict how a starting pitcher will perform. It combines past performance data with today's environment into one number. The higher the number, the better the pitcher is likely to pitch. The lower the number, the worse he'll pitch.

There are two PPR's (Pitcher Power Ratings) listed. One uses pitcher data for this year and prior two years (3 years total). The other only uses the current year data.

STRIKE ZONE – HOW TO USE IT

The most important number is PPR 3. This is the Pitcher Power Rating using 3 years of pitcher data combined with today's environment (wind, umpire, air density and more). The next most important number is PPR 1. This number only includes the current year. Blue numbers indicate a good game, red a bad game.

K/9 = K's per 9 innings BP = Bullpens Umpire = Ump trends Park = Type
Wind = Direction, strength Air Density = Lower numbers are better for hitting
